I did download these but there are in epub format.

I only have a computer and I want to know how to convert these so I can read them.

I had a friend today explain how I could read formats such as these (.epub, etc.) by installing an add-on to your browser. I did and can now read these books. By the way, I use Firefox browser but I would imagine the other major browsers have the add-ons also.

Here is the link for Firefox add-on:
