

SermonIndex Announcements :: SID....mp3?

SID....mp3? - posted by coops (), on: 2005/8/21 21:09

Hi,

Over time as I have been interested in different themes, I have downloaded many sermons on that theme. Unfortunately not all of them have ID tags, so now I have a good 30 or 40 sermons with no idea what they are!

Is there a way to find out who they are by through the number that comes after the SID in the filename? I tried searching for it here but to no avail!

I was sort of trying to avoid listening to every single one and trying to recognise the voice and pick up the title of their message.

God bless :-)

Sadly I would recommend you re-download the messages and then rename each one as you download them.

Oh, how annoying! Hehe oh well...

Hey just out of interest, I know theres databases out there that can read your file info and get details, update id3 tags etc

I think both winamp and windows media can use them.

Would it be useful to look into submitting info to them?
